---

Anne- I understand that we will need to postpone the San Mateo briefing until after you visit to NMED [and I am fine with that]. The San Mateo watershed problem is part of a much broader initiative to address legacy pollution from uranium mining in the Grants Mining District of New Mexico that we are undertaking in collaboration with EPA Region 9 [they are working with the Navajo], and other federal and state agencies including NMED. The attached report is our 5 year plan for dealing with this problem that you may wish to look at before meeting with Butch Tongate.
